5 WITHDRAWAL	-650₹
4 DEPOSIT	3000₹

Transfer money

Transfer to Amount →

Request loan

Amount →

Introduction:

It's a sweet and simple project that demonstrates bank transactions between the users. The user can transfer money, request a loan and close the user account. Every operation would be reflected in the current balance, for example if the user transfers the money to some other user, then there would be a decrement in the current balance of the user and an increment in the current balance of the person receiving the amount.

How to use:

- 1) Open the application and type "sh" as the user and "1111" as the pin.
- 2) Perform the desired application.

For example, transferring money from sh (current user) to jd (Jessica Davis) .

Enter "jd" and the amount to be transferred in the "Transfer to" block and the "Amount block" respectively.

- 3) The result would a decrement and an increment in the current balance of sh (the current user) and jd (Jessica Davis).

The above could be checked by going to Jessica's account and typing jd as the user and 2222 as the pin.
